Audit Access Expires Ago 5, 2020

You lose all access to this course, including your progress, on Ago 5, 2020.

Upgrade by Jul 1, 2020 to get unlimited access to the course as long as it exists on the site. [Upgrade now](#)

Exercise 9

Exercise 9

4/4 points (graded)

ESTIMATED TIME TO COMPLETE: 3 minutes

Note that you will have to answer all questions before you can click the Check button.

Below is a transcript of a session with the Python shell. For each expression being evaluated, provide the type and the value that the **last expression in the transcript returns**. If evaluating an expression would cause an error, select 'NoneType' and write the word 'error' (note this is a word, not a string, no quotes) in the box. While you could simply type these expressions into your IDE, we encourage you to answer them directly since this will help reinforce your understanding of basic Python expressions.

Assume that the expressions are evaluated in the order shown - that is, each problem part is evaluated directly after the previous problem part(s).

1.

```
>>> a = 3
>>> a == 5.0
>>> a
```

int

3

2.

```
>>> b = 10
>>> c = b > 9
>>> c
```

bool

True
